

IOlxObject

```
graph BT; TGlPrimitive --> AGroupObject; AGroupObject --> ACollectionItem; ACollectionItem --> IOlxObject;
```

The diagram illustrates a class hierarchy with four levels. At the base is 'TGlPrimitive', which inherits from 'AGroupObject'. 'AGroupObject' inherits from 'ACollectionItem', which in turn inherits from 'IOlxObject'. The 'IOlxObject' class is distinguished by a dashed border, while the others have solid borders. Arrows indicate the direction of inheritance from the more specific base classes to the more general derived classes.
