

IOlxObject

```
graph BT; TObjectVisibilityChange --> AActionHandler; AActionHandler --> ACollectionItem; ACollectionItem --> IOlxObject;
```

The diagram illustrates a class hierarchy with four levels. At the base is 'TObjectVisibilityChange', which inherits from 'AActionHandler'. 'AActionHandler' inherits from 'ACollectionItem', which in turn inherits from 'IOlxObject'. The 'IOlxObject' class is distinguished by a dashed border, while the others have solid borders. Arrows indicate the direction of inheritance from the base class at the bottom to the derived classes above.
