

IOlxObject

```
classDiagram
    TReflection --|> ACollectionItem
    ACollectionItem --|> IOlxObject
```

The diagram illustrates a class hierarchy. At the base is the **TReflection** class, represented by a solid rectangle. An upward-pointing arrow indicates that **ACollectionItem** inherits from **TReflection**. **ACollectionItem** is shown in a rectangle with a solid border. Another upward-pointing arrow shows that **IOlxObject** inherits from **ACollectionItem**. The **IOlxObject** class is enclosed in a dashed rectangle, which typically denotes an abstract class in UML notation.
